FOR IMMEDIATE RELEASE

BG PRODUCTS INTRODUCES STAINLESS STEEL BG PXC™ MACHINE

WICHITA, Kan. – January 30, 2009 – BG Products, Inc., introduces the first in a new line of machines, the stainless steel PXC™. The BG PXC™ is a new wave in Performance Exchange™ for Cooling Systems.

The BG PXC™ installs new 50/50 coolant into a vehicle's cooling system while simultaneously removing the old, spent coolant. Unlike many other systems, the BG PXC™ has the capacity of transfusing the coolant with or without running the engine. Most vehicles can be serviced with the engine off, thus preventing the common problem of continuous intermixing of new and used coolant due to the closing and opening of the thermostat. This process backflushes the vehicle's cooling system, removing scale and debris not accessible when going with the normal direction of coolant flow.

The BG PXC™ is a perfect addition or upgrade to any shop. It is small, compact and completely portable while maintaining excellent performance, durability and appearance.

BG Products, Inc., is dedicated to making vehicles last longer and perform better. In partnership with an international network of distributors, BG serves the driving public with innovative products and proven programs of automotive maintenance. In a recent national survey, dealerships said they use BG Products as their supplier of fluid maintenance service products and equipment by a margin of nearly 3 to 1 over any other supplier.

For more information on the BG line of PX machines, including the PXC™ as well as the complete line of BG products, go to bgprod.com/products.

To find your local BG Distributor, go to bgprod.com/distloc.
